Paint confidently, no matter the challenge

New color varnish  
Simpler & better

+ Easy to paint on  
vertical surfaces

+ Outstanding coverage even  
after a single coat

+ Maximum ring and  
scratch resistance

+ Very popular  
gloss level 25 (semi matt)

# Quicker, better, stronger: the Wigranit® Top Color

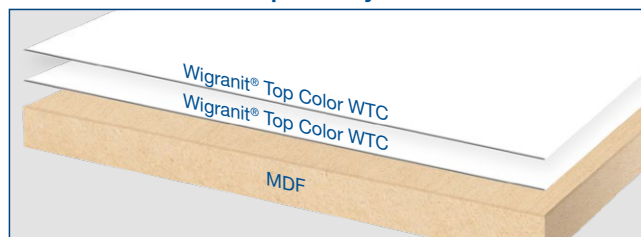

**Wigranit® Top Color WTC** is the new successor to Wigranit® Novacolor WNC, known to many processors as a universally applicable all-round solution. We have now further developed the renowned coloured paint system into a 2K-PUR coloured paint that has exceeded all expectations.

The further **optimised filling power** and the **extremely high stability** of Wigranit® Top Color WTC make painting vertical surfaces a walk in the park. With the capacity to apply higher quantities in a single work step, many objects can be **quickly completed without a second coat**, saving time. The addition of Zweihorn® Matt Concentrate MK allows the creation of an ultimate silk matt surface, and with the new Wigranit® Top Color

and clear coat options Crystallit®, Diadur® and Purolit available different gloss levels can be developed, from deep matt to very high gloss. Even the **surface smoothness** has been further optimised in the Wigranit® Top Color compared to its predecessor, with **extremely good ring and scratch-resistance**. The WTC/RAL 9010 and WTC/RAL 9016 white paints will be available as of mid-June from your Zweihorn® retailer. The coloured paint mixing system is currently being developed. **Look forward to the next generation of Zweihorn® coloured paints.**

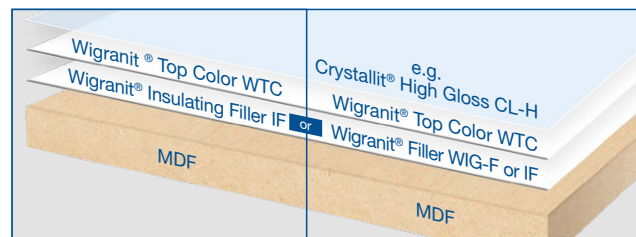

## System structures

### Structure with coloured paint only

Thanks to the **good insulating and filling properties on raw MDF** (even in areas with moisture such as bathrooms and kitchens), the product can be used as a base and top coat.

### Structure with filler

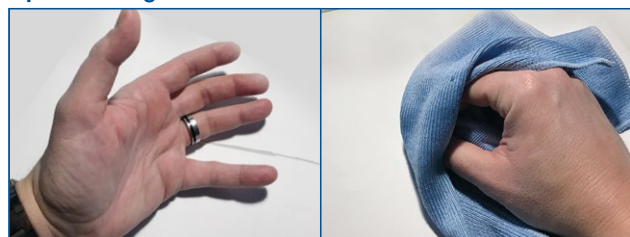

### Structure with filler and clear varnish

Of course, the new Wigranit® Top Color has also been developed as a system component. This allows the new Wigranit® Top Color to be topcoated with Crystallit®, Diadur® Plus or Purolit – **from deep matt to high gloss.**

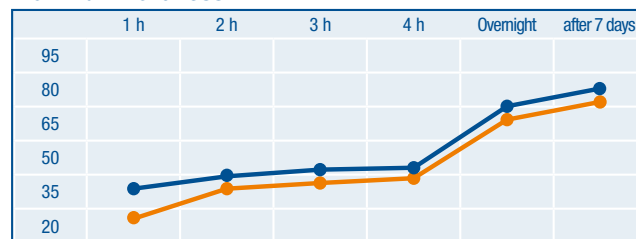

## + Further benefits

### Optimum ring resistance

Metal wear can be easily wiped away with a dry cloth.

### Maximum hardness

● Wigranit® Top Color

● Competition
